

65 GHz LeCroy

Road Map to 100 GHz World's Highest BW Real-Time Scopes

SPARQ SI Network Analyzers - S Parameters + TDR/TDT DC - 40 GHz

4, 8 and 12 Port Units

New! SPARQ 8 and 12-port units, capable of characterizing crosstalk on multi-lane differential devices, are available for order. The 12-port SPARQ can simultaneously measure NEXT and FEXT crosstalk on up to 3 differential lanes, and is similar in price to a lesser-capable 4-port VNA.

Scope Series Platforms	Real-Time Analog Bandwidth	LeCroy Model Modular	Real Time Max Acq. Modules Per Chassis	Hardware Bandwidth Upgrades	All Channel Max Sample Rate	2 Channel Max Sample Rate	1 Channel Max Sample Rate	Standard Acquisition Memory	Max Acquisition Memory	USA MSRP
